Java

```java
class Solution {
    public int[] queryResults(int limit, int[][] queries) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number} limit
 * @param {number[][]} queries
 * @return {number[]}
 */
var queryResults = function(limit, queries) {

};
```

TypeScript

```typescript
function queryResults(limit: number, queries: number[][]): number[] {

};
```

C++

```cpp
class Solution {
```

```cpp
public:
    vector<int> queryResults(int limit, vector<vector<int>>& queries) {

    }
};
```

C#

```csharp
public class Solution {
    public int[] QueryResults(int limit, int[][] queries) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun queryResults(limit: Int, queries: Array<IntArray>): IntArray {

    }
}
```

Go

```go
func queryResults(limit int, queries [][]int) []int {

}
```
